FEATURED PROJECTS

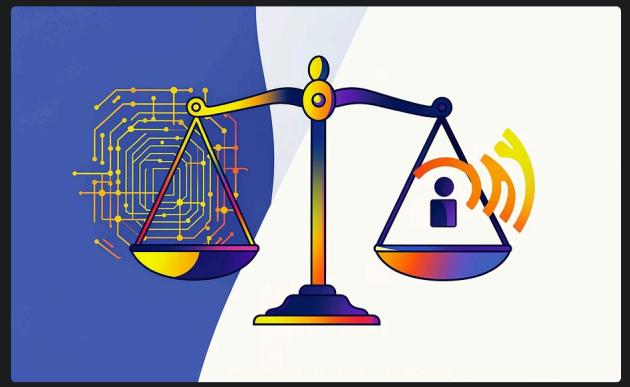
Deep-Dive Case Studies

Two projects that pushed me to think critically about AI in high-stakes, real-world contexts.

PayPal Fraud Detection

Analyzed how AI models detect fraudulent transactions at scale — balancing accuracy, speed, and false positives.

- Machine learning classification & anomaly detection
- Risk scoring frameworks and model evaluation
- Real-world impact: protecting millions of users daily



Facial Recognition in Law Enforcement

Examined the ethical, legal, and technical dimensions of deploying facial recognition in public safety.

- AI ethics, bias, and accountability frameworks
- Policy analysis and responsible deployment
- Real-world impact: shaping public trust in AI systems

ADDITIONAL PROJECTS

Breadth Across Domains

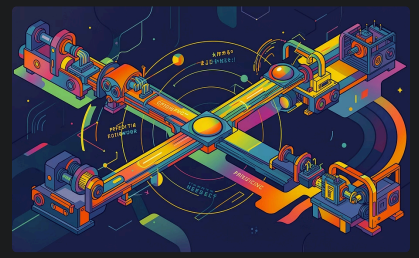
Three more case studies reinforcing analytical thinking and cross-industry AI application.

Public Sector Procurement Fraud

Explored AI-driven detection of fraud in government contracting. Strengthened skills in compliance logic, pattern recognition, and public-sector oversight.

AGI in Finance

Assessed the implications of advanced AI in financial decision-making. Focused on risk modeling, automation boundaries, and strategic foresight.



AI in Manufacturing Cognitive Networks

Studied how cognitive AI networks optimize production systems. Built understanding of predictive maintenance, efficiency modeling, and industrial AI.

EMPLOYER VALUE

How I Bring Value

What I've learned translates directly to problems employers face today.

Fraud & Risk Analysis

Evaluate AI systems for fraud detection, anomaly patterns, and financial risk.

Responsible AI & Ethics

Identify bias, assess accountability, and support ethical AI deployment.

Public Sector & Compliance

Understand regulatory context and oversight in government AI applications.

Finance & Decision Support

Frame AI use cases that improve financial modeling and strategic decisions.

Manufacturing Optimization

Apply cognitive AI concepts to production efficiency and predictive systems.

AI Strategy & Problem Framing

Translate business challenges into structured AI problem statements.

LET'S CONNECT

Ready to Apply AI Where It Matters

I'm looking for opportunities to contribute to teams solving real business and societal problems with AI — grounded in ethics, analytical rigor, and practical thinking.
